Availability: Immediate.

Photo and assembly drawing available at : [www.cellset.com/singleauxadset.html](http://www.cellset.com/singleauxadset.html)

Description of Unit : allows user to connect a stereo and an alert device source to the bike's auxiliary audio input. The unit requires a switched (on/off with key) power source. It is internally fused. Unfused switched power is present on power connectors for the stereo and alert device harnesses. Maximum current capability is 5 Amps.

Each input provide ground loop isolation. When issued an alert, the device mutes the stereo source and presents the alert audio to the auxiliary input.

Fail Safe Mode: In absence of power, alert device audio will be presented to the bike's auxiliary audio input.

## REQUIRED HARNESSES

The following tables give appropriate part numbers for the variety of harnesses required to connect the unit to the bike auxiliary audio input and power, and the user's alert and stereo devices.

Auxiliary Audio Harnesses (used to connect *SingleAuxADSet* to bike's audio system).

PART	DESCRIPTION	MSRP (USD)
95340	GL1800	10
95348	Harley	20
