

PRODUCT RELEASE ANNOUNCEMENT-REVISED

KENNEDY TECHNOLOGY GROUP

RELEASE DATE: 11/14/07 - Part #65348R1

Market: GL1500 Motorcycles.

Product: *Auxiliary audio retrofit service*

Part #: 95448, + switch assembly and audio harness

MSRP: USD54.99+ switch and audio harness

Description: This retrofit service adds a switching circuit and an auxiliary audio input connector to OEM GL1500 audio units.

The interface can be used with any standard Kennedy stereo device harness. For those harnesses that provide power, a KTG Universal Power Harness is required.

The interface can also be connected to any standard Kennedy audio interface module (e.g. IsoSet2, AuxSwitchSet, etc.). To connect to these modules, order KTG part 95449, Aux Audio Extender harness (USD15).

The design also includes a connector that allows the user to connect a switch to the retrofit circuit to route the audio source back and forth between the external source and the internal AM/FM radio. Any Kennedy simple switch assembly (round, square or toggle) or relay timer assembly can be used.

When used in conjunction with a Kennedy CellSet, MC/GPS3 or MC/GPS-Aux/ICS, a special splitter cable is required. This harness allows a single, simple switch or relay timer assembly to control both the Kennedy MC/GPS and the retrofit circuitry. This harness part number is 95450. The price is USD15.00

External sources which are powered from the motorcycle may require a ground loop isolator (e.g. IsoSet2).

Please note that the cost for this retrofit is nonrefundable and that the service may void any warranty in effect at the time of its installation.

Call for a return authorization number (RMA) and shipping instructions.

If audio units are found to be defective upon receipt, they will be returned unopened, freight collect.
